Program:-

```
String ssid     = "Simulator Wifi";   // SSID to connect to
String password = ""; // Our virtual wifi has no password
String host     = "api.thingspeak.com";  // Open Weather Map API
const int httpPort   = 80;
String url     = "/update?api_key=TBRSBCUPJXYW5F7P&field1=";
int setupESP8266(void) {
  // Start our ESP8266 Serial Communication
  Serial.begin(115200);    // Serial connection over USB to computer
  Serial.println("AT");    // Serial connection on Tx / Rx port to ESP8266
  delay(10);        // Wait a little for the ESP to respond
  if (!Serial.find("OK")) return 1;
  // Connect to 123D Circuits Simulator Wifi
  Serial.println("AT+CWJAP=\"" + ssid + "\",\"" + password + "\"");
  delay(10);        // Wait a little for the ESP to respond
  if (!Serial.find("OK")) return 2;
  // Open TCP connection to the host:
  Serial.println("AT+CIPSTART=\"TCP\",\"" + host + "\"," + httpPort);
  delay(50);        // Wait a little for the ESP to respond
  if (!Serial.find("OK")) return 3;
  return 0;
}
void anydata(void) {
  int temp = map(analogRead(A0),20,358,-40,125);
  // Construct our HTTP call
  String httpPacket = "GET " + url + String(temp) + " HTTP/1.1\r\nHost: " + host +
"\r\n\r\n";
```

```
 int length = httpPacket.length();
 // Send our message length
 Serial.print("AT+CIPSEND=");
 Serial.println(length);
 delay(10); // Wait a little for the ESP to respond if (!Serial.find(">")) return -1;
 // Send our http request
 Serial.print(httpPacket);
 delay(10); // Wait a little for the ESP to respond
 if (!Serial.find("SEND OK\r\n")) return;
}
void setup() {
 setupESP8266();
}
void loop() {
 anydata();
 delay(10000);
}
```

Help
Channels store all the data that a ThingSpeak application collects. Each channel includes eight fields that can hold any type of data, plus three fields for location data and one for status data. Once you collect data in a channel, you can use ThingSpeak apps to analyze and visualize it.
Channel Settings
Percentage complete: Calculated based on data entered into the various fields of a channel. Enter the name, description, location, URL, video, and tags to complete your channel.
Channel Name: Enter a unique name for the ThingSpeak channel.
Description: Enter a description of the ThingSpeak channel.
Field#: Check the box to enable the field, and enter a field name. Each ThingSpeak channel can have up to 8 fields.
Metadata: Enter information about channel data, including JSON, XML, or CSV data.
Tags: Enter keywords that identify the channel. Separate tags with commas.
Link to External Site: If you have a website that contains information about your ThingSpeak channel, specify the URL.
Show Channel Location:
Latitude: Specify the latitude position in decimal degrees. For example, the latitude of the city of London is 51.5072.
Longitude: Specify the longitude position in decimal degrees. For example, the

Using the Channel
You can get data into a channel from a device, website, or another ThingsSpeak channel. You can then visualize data and transform it using ThingSpeak Apps.
See Get Started with ThingSpeak" for an example of measuring dew point from a weather station that acquires data from an Arduino® device.

Help
API keys enable you to write data to a channel or read data from a private channel. API keys are auto-generated when you create a new channel.
API Keys Settings
Write API Key: Use this key to write data to a channel. If you feel your key has been compromised, click Generate New Write API Key.
Read API Keys: Use this key to allow other people to view your private channel feeds and charts. Click Generate New Read API Key to generate an additional read key for the channel.
Note: Use this field to enter information about channel read keys. For example, add notes to keep track of users with access to your channel.
